

MINI PROJECT DOCUMENTATION

SkillBridge AI

Smart Career Gap Analyzer

"Bridge Your Skills. Build Your Future."

Development Platform: Base44 AI

Live Application

<https://warping-bridge-career-path.base44.app>

Prepared as a B.Tech CSE (AI & ML) Mini Project

1. Project Overview

SkillBridge AI is an AI-assisted career guidance web application developed using Base44 AI. It is intended to help students understand the skills associated with their target job roles, identify areas where their skills may need improvement, and organize their career preparation.

2. Problem Statement

Students often find it difficult to identify the difference between their current skills and the skills required for their desired jobs. Without clear guidance, they may struggle to prioritize learning, select relevant projects, and prepare effectively for placement interviews.

3. Objectives

- Help students explore suitable entry-level career roles.
- Compare a student's listed skills with the skills associated with a selected job role.
- Highlight missing or underdeveloped skills.
- Provide learning recommendations and a structured preparation roadmap.
- Support technical interview preparation.
- Encourage students to monitor their career-preparation progress.

4. Proposed Solution

SkillBridge AI provides a single web-based place for career exploration and skill-development planning. A student can provide profile information, select a target role, review the available skill-gap analysis, and explore suggested learning activities. AI-assisted recommendations are used where enabled in the application.

5. Key Features

Career Role Exploration

Explore career paths such as Python Developer, Full Stack Developer, AI/ML Engineer, Data Analyst, and Software Developer, depending on the roles available in the application.

Skill Gap Analysis

Compare the student's listed skills with the skills associated with a selected role and identify areas for improvement.

Personalized Learning Roadmap

Organize learning priorities into goals and practical activities where supported by the application.

AI-Assisted Career Guidance

Offer career-related suggestions and learning recommendations through the AI capabilities configured in Base44.

Interview Preparation

Support placement preparation with role-specific practice questions and feedback where available.

Progress Tracking

Track learning goals and preparation activities where these functions are available in the deployed application.

6. Application Workflow

1. Open the deployed SkillBridge AI application.
2. Register or log in if prompted.
3. Enter educational details and current skills, where requested.
4. Select a target job role from the available options.
5. Review the skill-gap analysis provided by the application.
6. Explore the available learning recommendations and interview-preparation features.

7. Technology Used

Component	Details
Development platform	Base44 AI
Application type	Web application
AI functionality	AI-assisted recommendations, where configured
User interface	Web-based user interface
Backend and data management	Base44 platform capabilities, as configured in the application

8. Target Audience

- B.Tech and other college students
- Computer Science and AI/ML students
- Fresh graduates
- Internship applicants
- Students preparing for campus placements
- Entry-level software job seekers

9. Benefits

- Helps students plan career preparation around a chosen role.
- Makes skill-development priorities easier to understand.
- Brings career guidance and learning planning into one application.
- Encourages continuous learning and interview practice.

10. Limitations

- Recommendations depend on the accuracy of the student's profile and the job-role data available.
- Skill requirements vary by employer and job description.

- AI-generated recommendations should be checked against reliable sources.
- The application does not guarantee interviews, job offers, or placement outcomes.
- Some features may depend on Base44 configuration or external service availability.

11. Future Enhancements

- Resume upload and skill extraction.
- Matching against current job descriptions.
- Integration with verified job and internship listings.
- Downloadable personalized learning roadmaps.
- Skill assessment quizzes and progress analytics.
- Multilingual support, including Telugu and English.

12. How to Access the Application

Open the live application using the link below:

<https://warping-bridge-career-path.base44.app>

13. Conclusion

SkillBridge AI explores how AI-powered web application development can support students preparing for their careers. By bringing together career exploration, skill-gap identification, and learning guidance, the project aims to make placement preparation more organized and accessible.

Project Information

- **Project Title:** SkillBridge AI — Smart Career Gap Analyzer
- **Project Type:** Mini Project
- **Domain:** AI-assisted career guidance
- **Development Tool:** Base44 AI
- **Live Demo:** <https://warping-bridge-career-path.base44.app>

Note: This document describes the project's intended purpose. Confirm that each feature is available in the deployed application before presenting it as implemented.
